

.Vec().createSeq()

Excerpt from code,

```
u = PETSc.Vec().createSeq(N*N)
u_new = u.duplicate()
rhs = u.duplicate()
```

The `.Vec().createSeq()` function is a wrapper for the `VecCreateSeq()` function. The function is,

```
VecCreateSeq(MPIComm comm, PetscInt n, Vec *v)
```

Where each of the input and output parameters are,

- `comm` - MPI communicator
- `n` - length of the vector
- `v` - the outputted vector

This function is a way to produce a vector.
